

# Creating Vibrant Dashboards

A  Skillwave Product  
with content from

© Skillwave Training

1

## Workshop Goals

### What they aren't:

- Remember everything
- Master every aspect of the tools

### What they are:

- Familiarity with the toolset
- Comfort in working with the tools
- Understanding of key concepts, theories and methods
- Providing you with techniques to apply to your scenarios

© Skillwave Training

2

# What We Will Cover

What are Dashboards?

Dashboarding Tools

Putting it all together

Getting help

Demo of Excel "Power" tools

© Skillwave Training

3

# Who's Ken?

FCPA, FCMA

Owner of Excelguru.ca website, blog & forum

Microsoft MVP

2006-2015	Excel

# Data Visualization Overview

Content Created by **XGURU**  
www.excelguru.ca

© Skillwave Training

10

# Data Visualization Overview

## Goals of data visualization

-   
Turn Data into Information
-   
Let Users Spot Key Info Quickly
-   
Increase User Engagement

## Method

Illustrate your story

## Caveat

Always review your completed work!

© Skillwave Training

11

# Dashboarding

## What is a dashboard?

Visual summary

Collection of key information in one place

Should show your most important stats

Often (but not always) includes a variety of charts

## Overall intent

Quick consumption of Key indicators

© Skillwave Training

13

# The Dashboard's Purpose

~~Provide solutions~~

Expose problems

© Skillwave Training

14

# Dashboarding Tools

Conditional Formatting  
Cell Based Visualizations  
Custom Number Formats  
Charts  
Interactivity tools

© Skillwave Training

15

# A word on Colour...

Question 1:

What colours do we use to signify bad/good?

Answer:

Red/Green

Question 2:

What is the most common form of colour blindness?

Answer:

Red/Green

Know your audience and customize your visualizations if needed!

© Skillwave Training

17

# Conditional Formatting

© Skillwave Training

18

# Conditional Formatting

## Great for

- Data comparison
- Visualization of outliers
- Adding engagement

## Types

- Cell highlighting
- Colour scales
- Icon sets
- Data bars

© Skillwave Training

20

# Color Scales

Great for  
Identifying Outliers

Caution  
Can be overwhelming

## Suggested Modifications

Limit your colours

Use a rule with a white mid-point

Modifying your colours

Home → Conditional Formats → Manage

Select your rule → Edit

Start From:  
Colour Scales - Begin.xlsx

© Skillwave Training

22

# Data Bars

Great for  
Quickly identify proportion  
Showing value related to others  
Identify outliers

## Suggested Modifications

Modifying Displays

Home → Conditional Formats → Manage

Select your rule → Edit

Available Modifications

Axis position

Negative bar colours

Start From:  
Data Bars - Begin.xlsx

© Skillwave Training

24

# Icon Sets

## Great for

Highlighting states/thresholds  
Adding engagement

## Challenges

No “align to right”

## Suggested Modifications

### Mix and match

Home → Conditional Formats → Manage  
Select your rule → Edit  
Mix and match the icons  
Mix and match the rules as needed

### Display icon only

Toggle in the Manage Rule section  
Allows hiding the data for the cell

Start From:  
Icon Sets - Begin.xlsx

© Skillwave Training

26

# Highlighting Cells

## Great for

Highlighting states/thresholds  
Layering with other rules

## Advanced

Custom rules based on formulas

## Easy to Implement Configurations

### Highlight cells

Greater than, less than, equal to, etc..  
Highlight duplicates

### Top/Bottom Rules

Top/Bottom x  
Top/Bottom x%  
Above/Below Average

Are you getting a mixture of two rules?  
Read this: <https://www.excelguru.ca/content.php?278>

Start From:  
Highlight Cells - Begin.xlsx

© Skillwave Training

28

# Cell Based Visualizations

© Skillwave Training

29

# Sparklines

## Great for

- Quick trend indicators
- Presenting general shape of variation
- Locating right inline with the data

## Caution

- Not intended to provide answers
- Limited formatting options

## Suggested Modifications

### Change types

- Columns show data points better than lines

### Point Highlighting

- Highlight high point/low point
- Style gallery updates to reflect options

Clustering multiple sparklines provides a "small multiples" effect

Start From:  
Sparklines - Begin.xlsx

© Skillwave Training

31

# Formula Based Charting

Great for  
Building progress indicators

How do you do it?  
Leverage the REPT() function  
Use the following fonts:  
Webdings  
Wingdings, Wingdings2, Wingdings3

Start From:  
Formula Charts - Begin.xlsx

© Skillwave Training

33

# Custom Number Formats

Great for  
Making numbers more readable

Are These Variances Good or Bad?			
	April		
	Actual	Budget	Variance (\$)
Revenues			
Alcoholic Beverages	15,747.28	25,012.00	(9,264.72)
Food & Non-Alc Beverages	34,523.71	44,740.00	(10,216.29)
Other	237.79	3,867.00	(3,629.21)
Total Revenues	50,508.78	73,619.00	(23,110.22)

What the Symbols Mean	
F is for Favourable	U is for Unfavourable
Revenues > Budget	Revenues < Budget
Expenses < Budget	Expenses > Budget

Aren't These Easier to Read?			
	April		
	Actual	Budget	Variance (\$)
Revenues			
Alcoholic Beverages	15,747.28	25,012.00	9,265 U
Food & Non-Alc Beverages	34,523.71	44,740.00	10,216 U
Other	237.79	3,867.00	3,629 U
Total Revenues	50,508.78	73,619.00	23,110 U
Expenses			
Cost of Sales	21,977.81	24,296.00	2,318 F
Labour & Benefits	35,166.60	45,327.25	10,161 F
Other Operational	10,830.99	13,210.00	2,379 F
Total Expenses	67,975.40	82,833.25	14,858 F
Net Income (Loss)	(17,466.62)	(9,214.25)	8,252 U

Start From:  
Custom Number Formats-Begin.xlsx

© Skillwave Training

35

# Custom Number Format Quick Reference

## The Custom Number Format String

Declare up to four formats:

```
<positive>;<negative>;<zero>;<text>
```

Formats can be omitted from the right side  
Missing formats will default to <positive>

## Creating the Favourable/Unfavourable Variance

Select the cells you wish to format

Right click → Format Cells → Number → Custom

Enter one of the following formats:

```
#,##0 F; [Red]#,##0 U;"- "
```

```
#,##0.00 F; [Red]#,##0.00 U;"- "
```

Click OK

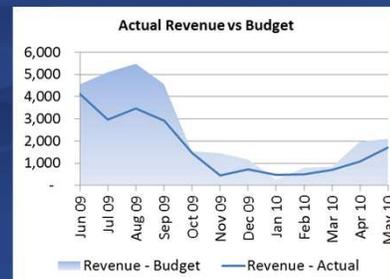

Symbol	Use
0	Always show a value
#	Show values but suppress 0's
,	Thousands separator
.	Decimal separator
;	Separates positive, negative, text elements
()	Parenthesis
" "	Wrap text in quotes
[Red]	Sets colour (only certain colours permitted)

41

## 5 Rules of Effective Charting

Rule # 1: Every chart should tell a story

Purpose of charting:

To turn data into information

To be consumed as quickly as possible

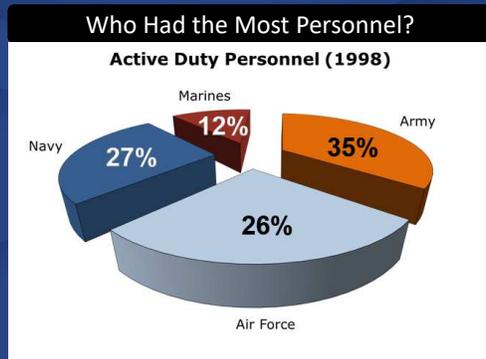

© Skillwave Training

43

# 5 Rules of Effective Charting

Rule # 2: Pick the RIGHT chart type

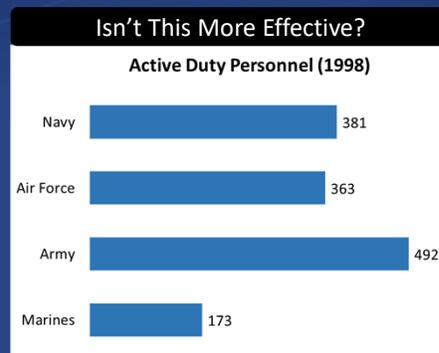

© Skillwave Training

44

# 5 Rules of Effective Charting

Rule # 2: Pick the RIGHT chart type

## Rule # 2: Pick the RIGHT chart type

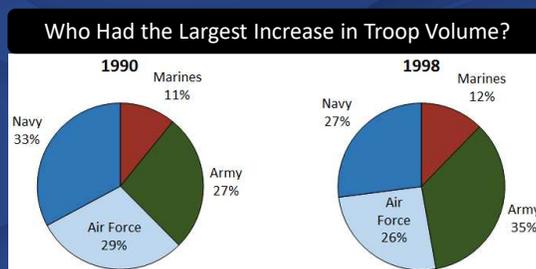

© Skillwave Training

48

# 5 Rules of Effective Charting

## Rule # 2: Pick the RIGHT chart type

© Skillwave Training

49

# 5 Rules of Effective Charting

## Rule # 2: Pick the RIGHT chart type

### Remember:

- The human brain has trouble with angles
- Bar and column charts are intuitive
- Try to avoid pie charts
- Always skip 3D charts

© Skillwave Training

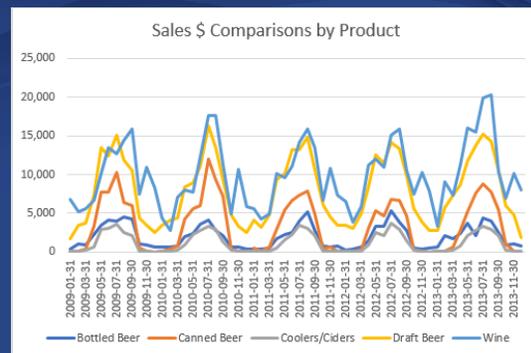

50

# 5 Rules of Effective Charting

## Rule # 3: Make it a SHORT story

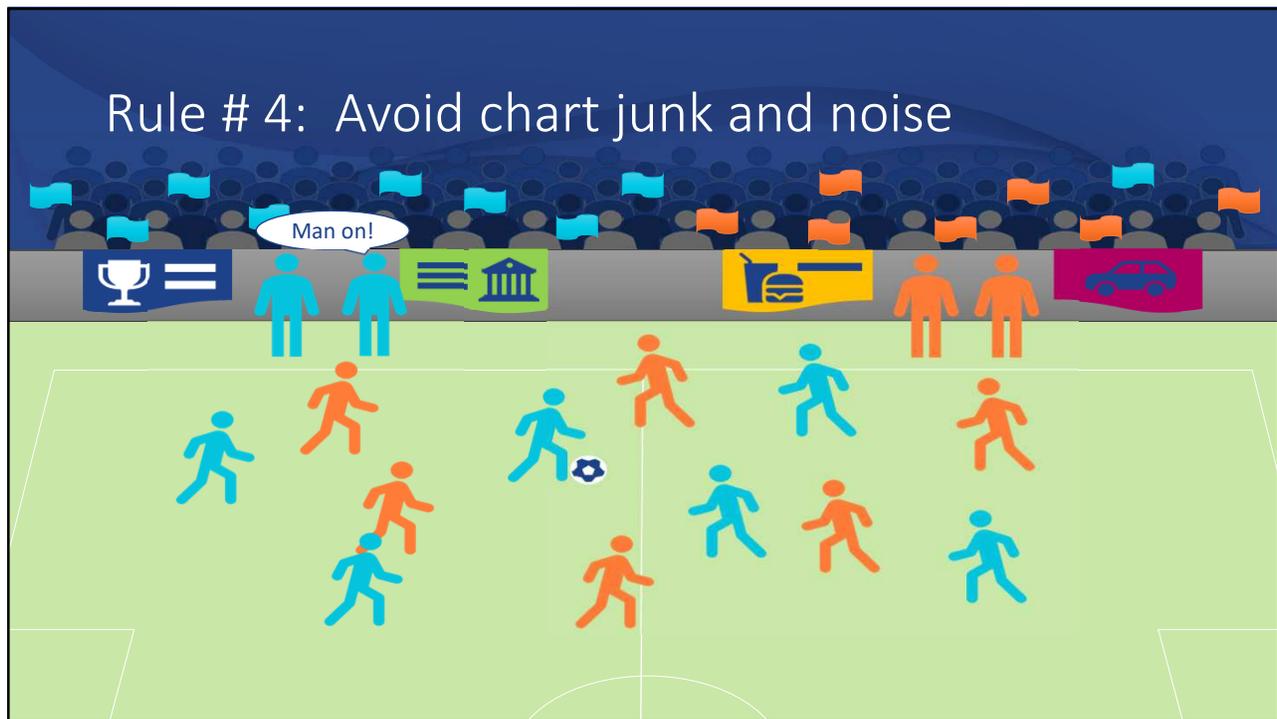

### Design Tips:

- Focus on the story you want to tell!
- Don't try to put in too much data
- Don't try to use too many series

© Skillwave Training

51

52

## 5 Rules of Effective Charting

Rule # 4: Avoid chart junk and noise

Always:

- Customize your charts
- Remove unnecessary elements
- Always skip the 3D chart options
- Skip adding extraneous elements unless they add value

 Chart Junk confuses and distorts the story (sometimes intentionally!)

© Skillwave Training

53

# 5 Rules of Effective Charting

Rule # 5: Review your completed chart

Ask yourself:

- Does the chart REALLY tell the story you intended?
- Could it be displayed in a better format?
- Is it self-explanatory?
- Can you review anything to make it more effective?

© Skillwave Training

54

# Perspective

*My play was a complete success. The audience was a failure.*

*-Ashleigh Brilliant*

Follow the 5 rules, and you shouldn't end up here!

© Skillwave Training

55

# Building Effective Charts

© Skillwave Training

56

## Pie Charts

### Great for

- Showing one point makes up majority
- Attracting attention

### The most overused chart type

- Too hard to interpret
- The brain has a tough time with angles
- Lacks precision
- 3D adds distortion to make it harder

VS

If you **MUST** use a pie chart

### Minimize the info

- No more than three data series

### Call out the key info

- Label your series

### Minimize the noise

- Remove all fill areas

Try an alternate layout for a bar or a column chart. You will probably find it more effective!

© Skillwave Training

Start From:  
Pie Chart - Begin.xlsx

58

# Bar Charts

## Great for

Comparing values against each other

## Choose over Column Charts when:

Category names are long

All category names are needed

## Suggested Modifications

### Add precision

Add data labels

### Minimize the noise

Remove gridlines

Remove the X axis

Start From:  
Bar Charts - Begin.xlsx

© Skillwave Training

60

# Column Charts

## Great for

Comparing values against each other

## Choose over Bar Charts when:

Category names are short

Category names can be implied

## Suggested Modifications

### Add precision

Add data labels

### Minimize the noise

Remove gridlines

Remove the Y axis

Start From:  
Column Charts - Begin.xlsx

© Skillwave Training

62

# Line Charts

## Great for

Comparing values over time

## Caution

Lines imply data where it doesn't exist

Used curved lines sparingly

Don't add too many series

## Suggested Modifications

### Add precision

Add markers

Add data labels to a single series

### Make better use of space

Plot date axis on tick marks

Consider controlling Y axis boundaries

If your data is always close to target, consider plotting the variance from target versus a 0 axis.

© Skillwave Training

Start From:  
Line Charts - Begin.xlsx

64

# Combination Charts

## Great for

Showing different data in best format

Telling different stories in one chart

Creating engagement

## Changing a "flat" chart to a Combo Chart

Select any series on your chart

Right click the series

Go to Change Series Chart Type

Combination charts are the secret to "black magic" charting in Excel

© Skillwave Training

Start From:  
Combination Charts - Begin.xlsx

66

# Bullet Charts

## The elements of a Bullet Chart

Copy the template from:  
Templates\Bullet Template.xlsx

© Skillwave Training

## Bullet Chart Recipe

### Copy the template into your file

- Open the template file
- Copy the chart into your solution
- Close the template

### Link the chart to your data

- Link all data as described
- Copy the chart to your dashboard
- Hide the worksheet with the charts on it

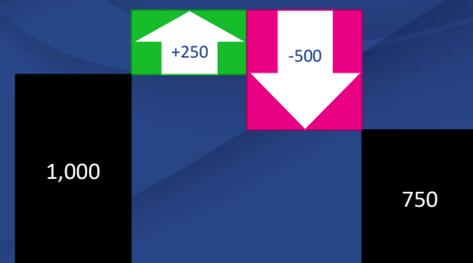

Do this for each bullet chart you need

Start From:  
Bullet Charts - Begin.xlsx

68

# Waterfall Charts

## Reading a Waterfall Chart

Copy the template from:  
Templates\Waterfall Template.xlsx

© Skillwave Training

## Waterfall Chart Recipe

### Copy the template into your file

- Open the template file
- Copy the chart into your solution
- Close the template

### Link the chart to your data

- Link all data as described
- Copy the chart to your dashboard
- Hide the worksheet with the charts on it

Do this for each waterfall chart you need

Catch-up Point:  
Waterfall Charts - Begin.xlsx

70

# Adding Interactivity

© Skillwave Training

71

# Adding Interactivity

## Method overview

- Change an input
- Restate the dashboard source data

## Plumbing

- Base dashboard fields/charts off a dynamic source
- Drive inputs from dashboard controls

© Skillwave Training

73

# Controls To Drive Dashboards

## Any dashboard

- Data Validation lists
- Form Controls

## PivotTables

- Slicers (Excel 2010+)
- Timelines (Excel 2013+)

An awesome walkthrough of data validation lists (including write-ups and videos can be found at <http://www.contextures.com/xlDataVal01.html>

My article on using Form controls can be found at: <https://www.excelguru.ca/content.php?151>

© Skillwave Training

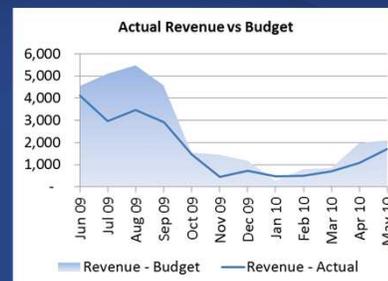

74

# “Dynamicizing” Sales To Budget

Converting Sales to Budget to be dynamic

Toggle between livestock categories

Update all dashboard items at once

© Skillwave Training

Start From:  
Dynamicizing - Begin.xlsx

75

# Interactive Pictures

## VLOOKUP for pictures

Create a “picture” table

Name the picture cells

Name a “driver” cell

Adjust the named formula to use the INDIRECT() function

Create a linked picture

Update the picture’s formula

Full steps to accomplish this can be found at  
<https://www.excelguru.ca/content.php?279>

Start From:  
Interactive Pictures-Begin.xlsx

© Skillwave Training

77

# Infographics

 Content Created by  [www.excelguru.ca](http://www.excelguru.ca)

© Skillwave Training

78

# Infographics

## What is an Infographic?

Collections of Graphics in one place  
Usually an illustrated story

## The Purpose of an Infographic

Tell a story  
Engage the user  
Hold the user's attention

© Skillwave Training

79

# Building Infographics

## Create individual "Info Pieces"

Create a chart  
Add shapes  
Group them together

## Add more "Info Pieces"

Add background images/icons

© Skillwave Training

Catch-up Point:  
Infographics - Begin.xlsx

80

# Sample Dashboards

Content Created by **XGURU**  
www.excelguru.ca

© Skillwave Training

81

# Pulling It All Together

- Golf course dashboard
- Payroll dashboard
- Inventory dashboard
- Charity resource dashboard

 Catch-up Points for this Chapter found in:  
\\Sample Dashboards\\
