# Using Power BI to Alert You of an Issue

## 1. Create an Audit Query

Test	Result
Four columns in source	pass
Unexpected column names	pass

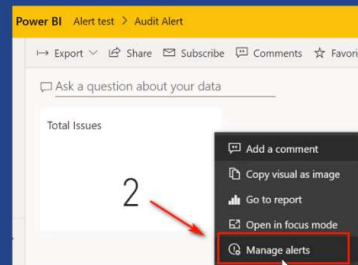

## 2. Write a Measure to Count the Issues

```
Total Issues =  
CALCULATE ( COUNTROWS ( Audit ), Audit[Result] = "Fail" )
```

## 3. Add the Measure to a Card

## 4. Pin the Card to a Dashboard in Power BI
