

Parsing an HTML Web Page

© Skillwave Training

Does your Navigator window show...

Document?

Select Document -> Transform Data

HTML Code?

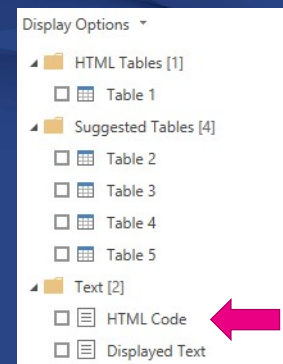

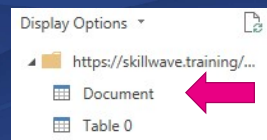

Select HTML Code -> Transform Data

Click the fx beside the formula bar

Replace the formula with `Web.Page (#"HTML Code")`

Drill-in to the Document's Table

Whichever you did, you should end up here:

	A ^B _C Kind	A ^B _C Name	Children	A ^B _C Text
1	Element	HTML	Table	null

Helpful Tips for Parsing a Web Page (as HTML)

Basic Understanding of HTML is required!

In your browser

- Use your browser's Dev Tools (F12)
- Mouse over the code to highlight sections in the page
- Take note of the tag names and locations

In Power Query

- If you see a Navigation step, add a Filter quickly to stop steps from combining
- Be prepared to make mistakes
